

QUARTERLY ACTIVITIES REPORT SEPTEMBER 2021

Discovery Africa Limited (ASX: DAF) (“the Company”), is an Australian based mineral exploration company with a 100% interest in the Chulitna Project in Alaska, USA.

The Company provides the following update for the Quarter;

Exploration Activities

Chulitna Project (Alaska) (100% interest)

The Company identified and secured the Chulitna Project in Alaska, USA via the staking of three hundred and eight (308) State mining claims – which have been officially registered by the Alaska Department of Natural Resources.

The project area comprises 199.4km², is located on State of Alaska public lands, and is not subject to any Native Title claims, native lands, or native claimant groups. The project lies approximately 250km north of Anchorage and close to the major Parks Highway, which runs mostly parallel to the State owned Alaska railroad.

The project hosts numerous prospect areas identified from historical works, which are prospective for gold, silver, copper, tin and base metals.

Partin Creek Prospect

The Company conducted initial works at the Project via the engagement of an Alaskan professional geological (and associated) services group to conduct a comprehensive review of historical exploration works and results from selected priority prospects within the project area, including a review of geophysical survey data. From this, an initial field exploration sampling and geological mapping program was prepared and arranged, with the initial primary target area selected being the Partin Creek prospect.

The review of historical data at Partin Creek identified previous rock-chip sampling along 600m of exposed skarns and veins with anomalous gold, copper and silver mineralisation. The mineralised exposure at Partin Creek occurs along a steep south facing spur ridge that extends for ~1.4km, whilst airborne geophysical data shows a strong continuity of the lithologic basalt/limestone host to Partin Creek mineralisation that extends for ~10km within the project area.

Figures 1-2. Chulitna Project – Partin Creek Prospect Field Exploration Works

The initial field exploration sampling and geological mapping program was planned to duplicate the known gold occurrences at Partin Creek, to target a robust and coherent gold system with considerable strike length.

The completed fieldwork sampling and geological mapping program was conducted with helicopter support over a two-week period, comprising the collection of 252 samples (166 rock and 86 talus fines samples) and geological mapping works across prospective sites at the Partin Creek prospect area.

The samples were sent to the laboratory for multi-commodity analysis testing, with results currently being compiled, analysed and interpreted.

Geological mapping works conducted and identified mineralisation across a ~1.6km strike length at the Partin Creek prospect.

The Company is encouraged this phase of work at the Partin Creek prospect (subject to results achieved), will lead to next stage follow up works with the aim to identify priority anomalous targets for subsequent potential drilling works.

The Company's near-term strategy to advance the Chulitna Project is:

- Continue progress at the Partin Creek prospect, with results of the fieldwork sampling and geological mapping program awaited – then review and assess the laboratory results and prepare a follow up exploration program, including potential drilling works; and
- Review and assess the historical exploration works and results from other priority prospects within the project area.
