ASX Announcement

23 May 2022

CHULITNA PROJECT – COAL CREEK PROSPECT EVALUATION WORKS FIRM UP LITHIUM POTENTIAL

HIGHLIGHTS

- ✦ Handheld analyser readings confirm presence of lithium mineralisation within twelve historical Coal Creek drill-holes selected as initial priority for lithium evaluation works
- ✦ Re-analysis work of Coal Creek historical drill core progressing with core logging, sampling and laboratory analysis works, with the aim to establish a JORC lithium resource

Further to Discovery Alaska Limited's (ASX: DAF - "Discovery Alaska" or "Company") announcement on 19 May 2022, the Company is pleased to advise that evaluation works confirmed lithium minerals from historical drill core at the Coal Creek prospect, part of DAF's 100% owned Chulitna Project in Alaska, USA.

The Company conducted a detailed preliminary work program of the lithium occurrences at Coal Creek via scanning works on an initial twelve priority drill holes, using a SciAps Z-901 LIBS handheld analyser to determine rudimentary lithium content throughout the entirety of each drill hole. The scanner detected the presence of lithium across broad zones in all twelve drill holes, with all results listed in Appendix A.

The twelve priority scanned drill holes – DDH-14, DDH-15, DDH-20, DDH-21, DDH 24, DDH-25, DDH-33, DDH-36, and 06-43 to 06-46 identified positive results within the finer-grained aplitic intrusive. The preliminary scan results indicate the lithium is found disseminated throughout the priority drill holes, with selective concentrations within stockworked, mineralised greisen zones within the upper coarse-grained granite, and highly disseminated within the finer-grained granite.

Discovery Alaska Director, Jerko Zuvela said ***"The Company is excited to progress lithium exploration works at our Coal Creek prospect with positive scanning results indicating broad zones of lithium in all drill holes tested thus far. Next stage works include laboratory analysis testing of the prospective core identified from the scanned priority drill holes."***

We look forward to realising the lithium potential at our Coal Creek prospect and advancing works toward delineating a maiden JORC resource."

* The Company notes the scanner only takes readings within a small window, and the results don't account for the whole rock concentration within that interval.

Figures 1-2. Coal Creek Prospect Historical Drill Hole DDH-25 (showing selected greisen interval)

Project Background

The Company's 100% owned Chulitna Project area comprises 199.4km², is located on State of Alaska public lands, and is not subject to any Native Title claims, native lands, or native claimant groups. The project lies approximately 250km north of Anchorage and close to the major Parks Highway, which runs mostly parallel to the State-owned Alaska railroad.

The project hosts numerous prospect areas identified from historical works, which are prospective for lithium, gold, silver, copper, tin and base metals. The two main prospect areas currently identified within the project area are Partin Creek and Coal Creek.

Appendix A:

The following information is provided to ensure compliance with the JORC Code (2012) and ASX Listing Rule 5.7 requirements for the reporting of Exploration Results for the Chulitna Project. Please also refer to JORC Table 1 below.

Reference to Previous ASX Releases:

This document refers to the following previous ASX/TSX releases:

19 May 2022 – Chulitna Project – Coal Creek Prospect, Lithium Potential Identified

22 February 2021 – Strategic Chulitna Project Secured in Alaska

DISCOVERY alaska

The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement and, in the case of Mineral Resources or Ore Reserves, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed. Ragusa confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

Competent Person's Statement

The information contained in this ASX release relating to Exploration Results has been prepared by Mr Jerko Zuvella. Mr Zuvella is a Member of the Australasian Institute of Mining and Metallurgy, and has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Zuvella is a Director of Discovery Alaska Ltd and consents to the inclusion in this announcement of this information in the form and context in which it appears. The information in this announcement is an accurate representation of the available data from the Chulitna Project.

The 2021 and 2022 Chulitna Project exploration program includes a Quality Control/Quality Assurance (QA/QC) program overseen by Jesse C. Grady, MSc, CPG-11592. Mr Grady is a Qualified Person as defined by NI 43-101. Mr Grady has prepared and approved the technical information contained within this announcement.

Forward Looking Statements: Statements regarding plans with respect to the Company's mineral properties are forward looking statements. There can be no assurance that the Company's plans for development of its mineral properties will proceed as expected. There can be no assurance that the Company will be able to confirm the presence of mineral deposits, that any mineralisation will prove to be economic or that a mine will successfully be developed on any of the Company's mineral properties.

ABOUT DISCOVERY ALASKA LIMITED

Discovery Alaska Limited (ASX: DAF) is an Australian company with a 100% interest in the Chulitna Project in Alaska, USA.

The Company has an experienced board and management team with a history of exploration, operational and corporate success.

DAF leverages the team's energy, technical and commercial acumen to execute the Company's mission - to maximize shareholder value through development of our assets.

JORC Code, 2012 Edition – Table 1 report template

Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
Sampling techniques	<ul style="list-style-type: none"> Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling. Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used. Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information. 	<ul style="list-style-type: none"> Historic drill core scanned with SciAps Z-901 LIBS handheld analyser. Scanned all available drill core intervals. The scanner only takes readings within a small window, and the results don't account for the whole rock concentration within that interval.
Drilling techniques	<ul style="list-style-type: none"> Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc). 	<ul style="list-style-type: none"> Historic drill core.
Drill sample recovery	<ul style="list-style-type: none"> Method of recording and assessing core and chip sample recoveries and results assessed. Measures taken to maximise sample recovery and ensure representative nature of the samples. Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material. 	<ul style="list-style-type: none"> Historic drill core scanned with SciAps Z-901 LIBS handheld analyser. Scanned all available drill core intervals. The scanner only takes readings within a small window, and the results don't account for the whole rock concentration within that interval.
Logging	<ul style="list-style-type: none"> Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies. 	<ul style="list-style-type: none"> Geological logging works still in progress. No Mineral Resource estimation works applicable.

Criteria	JORC Code explanation	Commentary
	<ul style="list-style-type: none"> • Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography. • The total length and percentage of the relevant intersections logged. 	
Sub-sampling techniques and sample preparation	<ul style="list-style-type: none"> • If core, whether cut or sawn and whether quarter, half or all core taken. • If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry. • For all sample types, the nature, quality and appropriateness of the sample preparation technique. • Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples. • Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling. • Whether sample sizes are appropriate to the grain size of the material being sampled. 	<ul style="list-style-type: none"> • Historic drill core scanned via half drill core in core trays. • SciAps Z-901 LIBS handheld analyser scanned all available drill core intervals. • The scanner only takes readings within a small window, and the results don't account for the whole rock concentration within that interval.
Quality of assay data and laboratory tests	<ul style="list-style-type: none"> • The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total. • For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc. • Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established. 	<ul style="list-style-type: none"> • Historic drill core scanned with SciAps Z-901 LIBS handheld analyser. • Scanned all available drill core intervals. • The scanner only takes readings within a small window, and the results don't account for the whole rock concentration within that interval. • Table of drill core scanner readings included in Appendix A, in main body of announcement.
Verification of sampling and assaying	<ul style="list-style-type: none"> • The verification of significant intersections by either independent or alternative company personnel. • The use of twinned holes. • Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols. • Discuss any adjustment to assay data. 	<ul style="list-style-type: none"> • To date, all validation procedures are internal and no independent consultant has been engaged for sign-off. Internal checks have involved the consultant geologist conducting first pass scanning, and this has been validated by senior consultant geologist before reporting. • Data collection, inputting and storage, backup, and verification are being adhered to and followed. • SciAps Z-901 LIBS handheld analyser scanned all available drill core intervals. • The scanner only takes readings within a small window, and the results don't account for the whole rock concentration within that interval.

Criteria	JORC Code explanation	Commentary
<i>Location of data points</i>	<ul style="list-style-type: none"> • Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation. • Specification of the grid system used. • Quality and adequacy of topographic control. 	<ul style="list-style-type: none"> • Not conducted.
<i>Data spacing and distribution</i>	<ul style="list-style-type: none"> • Data spacing for reporting of Exploration Results. • Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied. • Whether sample compositing has been applied. 	<ul style="list-style-type: none"> • Data not for use in resource estimation nor used to determine grade continuity.
<i>Orientation of data in relation to geological structure</i>	<ul style="list-style-type: none"> • Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type. • If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material. 	<ul style="list-style-type: none"> • Historic drill core scanned via SciAps Z-901 LIBS handheld analyser. • Scanned all available drill core intervals. • The scanner only takes readings within a small window, and the results don't account for the whole rock concentration within that interval.
<i>Sample security</i>	<ul style="list-style-type: none"> • The measures taken to ensure sample security. 	<ul style="list-style-type: none"> • Historic drill core stored at Alaska Geologic Materials Centre warehouse.
<i>Audits or reviews</i>	<ul style="list-style-type: none"> • The results of any audits or reviews of sampling techniques and data. 	<ul style="list-style-type: none"> • No audits conducted. • To date, all review of sampling procedures are internal and no independent consultant has been engaged for sign-off. • Work carried out by consultants Yukuskokon Professional Services, LLC.

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
<i>Mineral tenement and land tenure status</i>	<ul style="list-style-type: none"> • Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings. • The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area. 	<ul style="list-style-type: none"> • Discovery Alaska's 100% owned Chulitna Project tenements are located within the Chulitna Region of the South Central Alaskan Range, Alaska. • The project area comprises 308 State mining claims (199.4km²) – which have been officially registered by the Alaska Department of Natural Resources, and are located on State of Alaska public lands, are not subject to any Native Title claims, native lands, or native

Criteria	JORC Code explanation	Commentary
		<p>claimant groups. The Project lies approximately 250km north of Anchorage and close to the major Parks Highway, which runs mostly parallel to the State owned Alaska railroad.</p> <ul style="list-style-type: none"> • There are no known impediments to maintain the licences and operate in the area. • 308 State mining claims – ADL734566 (Chulitna 1) - ADL734873 (Chulitna 308).
<i>Exploration done by other parties</i>	<ul style="list-style-type: none"> • <i>Acknowledgment and appraisal of exploration by other parties.</i> 	<ul style="list-style-type: none"> • Stated in body of announcement and referenced announcements.
<i>Geology</i>	<ul style="list-style-type: none"> • <i>Deposit type, geological setting and style of mineralisation.</i> 	<ul style="list-style-type: none"> • The Coal Creek prospect granite consists of at least two texturally and chemically different units: a seriate granite porphyry which is intruded at depth by a fine-grained equigranular to porphyritic biotite (zinnwaldite) granite. The seriate granite outcrops at surface and forms a small resistant knob. The granite contacts Devonian metasediments locally, producing skarn and hornfels. Greisen alteration is the main type of alteration which is characterized by complete quartz flooding and destruction of the original igneous fabric. The mineralization and greisen alteration is centered in and above the cupola of the biotite granite in the upper seriate granite unit along a 1700 ft by 600 ft northeast elongate dike like granite porphyry body.
<i>Drill hole Information</i>	<ul style="list-style-type: none"> • <i>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</i> <ul style="list-style-type: none"> ○ <i>easting and northing of the drill hole collar</i> ○ <i>elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</i> ○ <i>dip and azimuth of the hole</i> ○ <i>down hole length and interception depth</i> ○ <i>hole length.</i> • <i>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</i> 	<ul style="list-style-type: none"> • Table of drill hole data included in Appendix A, in main body of announcement.
<i>Data</i>	<ul style="list-style-type: none"> • <i>In reporting Exploration Results, weighting averaging techniques,</i> 	<ul style="list-style-type: none"> • Actual scanner readings included in Appendix A, in main body of

Criteria	JORC Code explanation	Commentary
aggregation methods	<p>maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</p> <ul style="list-style-type: none"> Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail. The assumptions used for any reporting of metal equivalent values should be clearly stated. 	<p>announcement.</p> <ul style="list-style-type: none"> No data aggregation methods used.
Relationship between mineralisation widths and intercept lengths	<ul style="list-style-type: none"> These relationships are particularly important in the reporting of Exploration Results. If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported. If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known'). 	<ul style="list-style-type: none"> Table of drill hole data included in Appendix A, in main body of announcement.
Diagrams	<ul style="list-style-type: none"> Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views. 	<ul style="list-style-type: none"> See main body of report.
Balanced reporting	<ul style="list-style-type: none"> Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results. 	<ul style="list-style-type: none"> All relevant information and results reported.
Other substantive exploration data	<ul style="list-style-type: none"> Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances. 	<ul style="list-style-type: none"> All relevant information and results reported.
Further work	<ul style="list-style-type: none"> The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling). Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive. 	<ul style="list-style-type: none"> The planned further work includes further works on the historic drill core, via geological logging and laboratory testing of selected drill core. See main body of report.
